

## GRADUATE CERTIFICATE

### INFORMATION SYSTEMS PROJECT MANAGEMENT

Information system project portfolios consist of a combination of off shored and on shore outsourcing as well as in house development. The successful collaboration between the various stakeholders in global teams is now a necessity. Project management has thus assumed a key role in determining the success of information technology (IT) based initiatives in this complex and dynamic environment. The Information Systems Project Management graduate certificate program has been designed to meet the needs of IT and other professionals who are interested in developing this expertise. The fifteen credit hour certificate program consists of coursework addressing key areas in the project management life cycle. These include project planning, requirements analysis and design, rapid application development (RAD) and implementation.
